

SECURED COMMUNICATIONS MADE EASY WITH STRATIUM GLOBAL

FAST, SECURE, UNCRACKABLE

The world's most secure, encrypted communications platform trusted by US law enforcement, military, and The Five-Eyes Counter-Terrorism alliance is now in Australia and New Zealand.

This communications platform is unlike any other. It can be remotely controlled to self-destruct – wiping data on a compromised device at the press of a keystroke.

The Global Secured Network[®] is not a chat app or text messaging service. It is a specifically-designed secured communications network for public and private organisations entrusted with information that needs to be shared – but also protected – from cyber-threats and unauthorised interception.

Now Stratium Global, led by former NSW Deputy Commissioner Nick Kaldas, has partnered with the creator of the Global Secured Network[®], the US-based Secured Communications LLC, run by former FBI and law enforcement officials, to provide exclusive access to this top-level technology in Australia and New Zealand.

ABOUT SECURED COMMUNICATIONS

- ✓ Encrypted phone calls
- ✓ Encrypted messaging (individual and group)
- ✓ Encrypted video conferencing
- ✓ Encrypted files and images
- ✓ Retain total control
- ✓ Remote security wipe function
- ✓ Secure command centre
- ✓ iOS, Android, PC and Mac compatibility
- ✓ Unlimited surge capacity
- ✓ No equipment to buy
- ✓ No software to maintain
- ✓ Same day deployment
- ✓ No impact to IT resources
- ✓ Cost effective

“What’s unique about this system is its ability to allow any public safety agency or private company to quickly exchange critical information.”

Sheriff Joe Lombardo,
Las Vegas Metropolitan
Police Department

AGENCY CONSIDERATIONS

Fast information sharing is critical for public safety agencies. But the challenge has always been dealing with radio communications that have limitations, and text messaging that is unsecure, slow and unreliable. Agencies are also now realising that inter-operability isn't just for emergencies, it is suitable for a wide range of on-going applications. Secured Communications delivers a faster, better, more reliable way to communicate every day and during times of crisis.

During the worst mass shooting in modern US history, the shootings at the Mandalay Resort in Las Vegas, law enforcement, first responders, and hotels relied on Secured Communications enabling a rapid response and saving lives.

BENEFITS OF USING SECURED COMMUNICATIONS

Secured Communications makes it simpler to share more information faster while protecting information security. Secured Communications also provides a simple solution for interoperable non-radio communication between agencies.

ENCRYPTION

All communication is end-to-end encrypted using Advanced Encryption Standard (AES 256 bit) technology. The National Institute of Standards and Technology (NIST) approved AES for communicating government classified "secret" and "top secret" information.

COMPLIANCE

Secured Communications integrates technologies and features for HIPAA compliant use. In addition, Secured Communications only uses FIPS Publication 140-2 approved encryption algorithms validated in all relevant categories.

CONNECTIVITY

You are always connected to your private secure network. Your PC/online Command Centre synchs with your iOS and Android mobile devices so whether you are at your desk or in the field, on duty or off duty, you will never miss your messages or file shares.

SERVICE RESTRICTIONS

Secured Communications service is available to public service, agencies and trusted businesses and organisations. The company vets requests for service.

BASIC OPERATIONS

Administrators manage the account, create groups, assign Operators, and invite Users. Account licenses are applied when Users register the mobile app. Online access is through a secure "Command Centre". Users can install the app to multiple devices.

LIVE CONFERENCING

Real time messaging, conferencing video and voice calls for all corporate needs. Up to 1,500 calls and 150 videos.
